INSTRUCTIONS

HOW THE RECEIPT GENERATOR WORKS

This system is designed to be simple, organized, and easy to use.
Each sheet has a specific role, and everything works together automatically to save you time and reduce errors.

---

1. START HERE (User Guide & Support)

This is your starting point.

What this sheet does:

- Shows you how to use the system
- Guides you on how to enable macros
- Provides support/contact options

👉 If anything is not working, start here first.

---

2. RECEIPT SHEET (Main Working Area)

This is where you create and manage receipts.

What you do:

- Select a customer (when you select the customer from the drop down, the address and phone number appears automatically)
  NB: For the phone number, make sure you ask for the one active on WhatsApp to send the receipt
- Select items (from the drop down)
- Enter quantity(manually)

What the system does automatically:

- Calculates totals
- Generates a clean receipt
- Prepares it for saving or sharing

Buttons available:

- **New Receipt** → Clears the form
- **Save Receipt** → Saves to database
- **Delete Receipt** → Removes a record

- **Generate PDF** → Exports receipt (You can create a folder on your desktop to store them)
- **Send via WhatsApp** → Sends instantly to the customer's WhatsApp

👉 This is where all your daily work happens.

---

3. RECEIPT DATABASE (ReceiptDB)

This sheet stores a summary of every receipt created.

It records:

- Receipt ID
- Date
- Customer Name
- Total Amount

👉 Think of this as your **receipt history**.

No need to edit this sheet, it updates automatically.

---

4. RECEIPT ITEMS DATABASE (ReceiptItemDB)

This sheet stores detailed information for each receipt.

It records:

- Receipt ID
- Item Name
- Description
- Quantity
- Unit Price
- Total

👉 This helps you:

- Track what products are selling
- Analyse item-level sales

---

5. CUSTOMERS SHEET (Customer Database)

This is where you store all customer details.

What you add:

- Customer Name
- Address
- Email
- Phone Number

How it helps:

- You select customers instead of typing manually in the receipt from the dropdown.
- Details automatically appear in receipts

  Press the Tab key to go to the next row to enter customer details

👉 Saves time and ensures consistency.

---

6. ITEMS SHEET (Product Database)

This is your product or service list.

What you add:

- Item Name
- Description
- Price

How it helps:

- Select items during receipt creation (from the dropdown)

  Prices and descriptions fill automatically

  Press the Tab key to go to the next row to enter item details

👉 No repeated typing, no pricing errors.

HOW EVERYTHING WORKS TOGETHER

1. Add your **Customers** and **Items** once
2. Go to the **Receipt Sheet** to create receipts
3. Click **Save Receipt**
4. The system automatically:
    - Stores summary in **ReceiptDB**

    - Stores full details in **ReceiptItemDB**
5. You can export or send receipts instantly

✅ WHY THIS SYSTEM IS POWERFUL

- No manual calculations
- No duplicate data entry
- No lost records
- Everything is automated and organized

SIMPLE WAY TO UNDERSTAND IT

- **Start Here** → Guide
- **Receipt Sheet** → Where you work
- **Customers & Items** → Your setup
- **Database Sheets** → Your records

FINAL BENEFITS TO YOU

✓ Faster receipt creation
✓ Accurate records
✓ Professional output
✓ Easy tracking
✓ Better business organization
